

” We needed a proven high performing engineered façade system which would provide certainty, in order to protect the city's investment and stand the test of time ”

Gordon Moller, Moller Architects

Viaduct Events Centre, Auckland

Since 1973, we have been designing and engineering high performing bespoke building envelope solutions. For the last 23 years, we have been independently performance testing and certifying these systems for seismic, wind, water and air infiltration in our two storey high façade testing laboratory at Window Engineering Consultants, Auckland, an independently IANZ certified facility.

From curtainwalls, windows, shopfronts, rooflights to structural glass entrances and balustrades, Thermosash integrates these separate elements to minimise trade junctions, thereby improving performance and speed of construction.

For proven engineered solutions call Thermosash Commercial.
